# Active

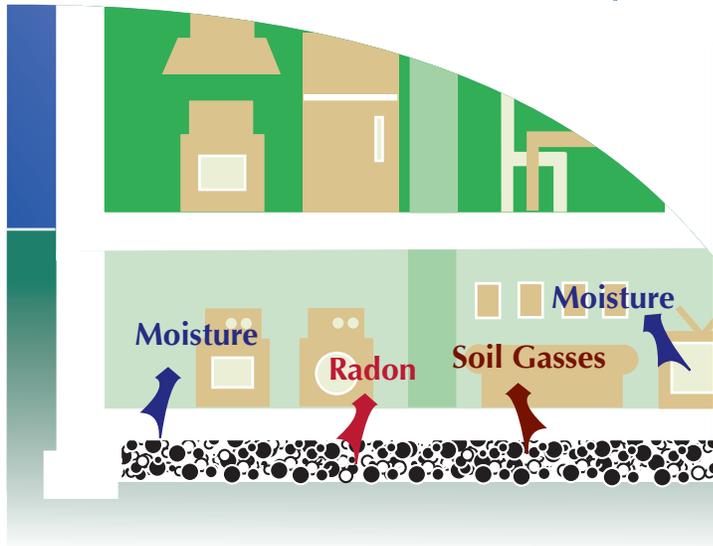

## Dampness Control

ADC is much more than a dehumidifier

- Removes moisture **before** it enters the house
- Dries slab and basement from the ground up
- Removes radon and noxious soil gasses
- Drier sub-slab is less conducive to pests
- Runs automatically with no homeowner maintenance
- Costs just pennies per day to operate
- Quiet and unobtrusive

## Basement without ADC System

**Harmful Elements**

Naturally occurring moisture and gasses build-up under the slab. Unless properly ventilated this moisture, radon and other harmful soil gasses enter your home's living area through the basement affecting your family's health.
